# The Business Objective

## Primary Question: How do annual members and casual riders use Cyclistic bikes differently?

Goal: Identify behavioral patterns to design targeted marketing strategies to convert casual users into profitable annual members.

Scope: Analysis of over 3.7 million historical rides (Nov 2024 - Oct 2025).

Data Integrity: All data rigorously cleaned and validated. No Personally Identifiable Information (PII) was used, ensuring complete user privacy.

# Overall Ridership: The Conversion Opportunity

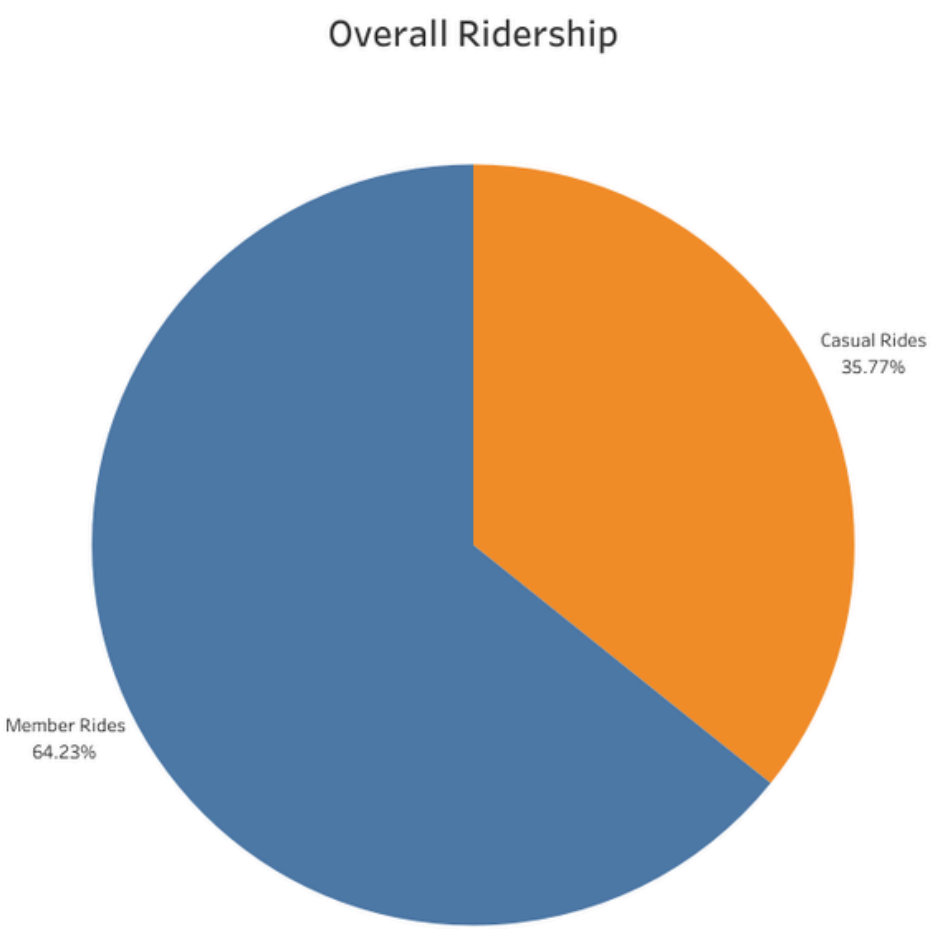
## 3,738,787 Total Rides

64.2% Annual Members

(2.4MRides - TheStableCore)

35.8% Casual Riders

(1.3MRides - TheOpportunity)

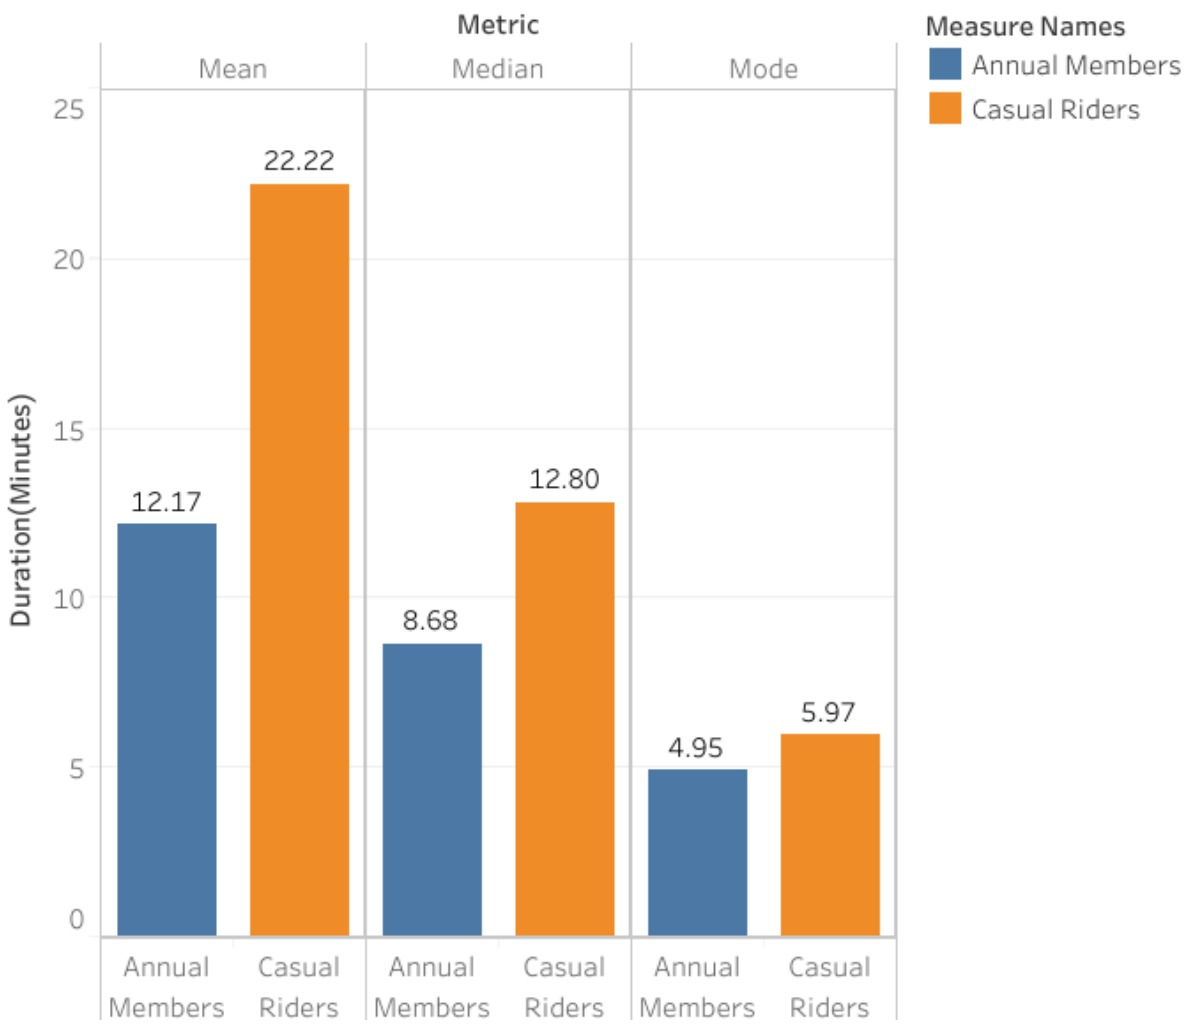


# Ride Duration: Efficiency vs. Exploration

Key Finding: Casual riders take trips that are nearly twice as long as members (82% longer on average).

Members (12.2 mins): Focused, point-to-point utility and commuting.

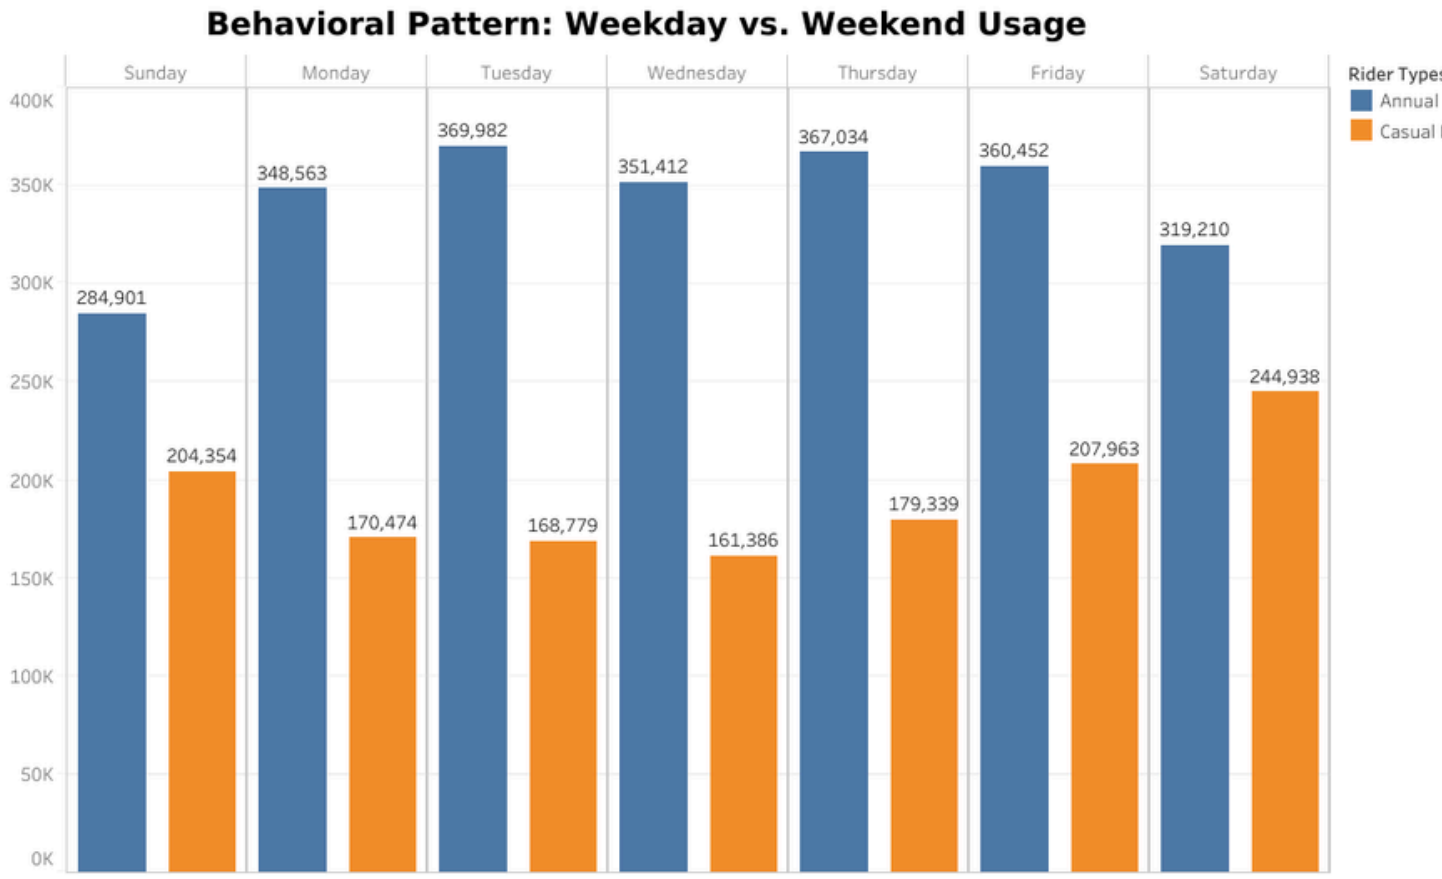
Casuals (22.2 mins): Leisure, sightseeing, and recreational exploration.



# Day of Week Patterns: Commuters vs. Weekenders

Members: Dominate the work week (Monday-Friday), peaking mid- week.

Casuals: Experience a massive surge on weekends. Over 33% of all casual rides happen on Saturday or Sunday.

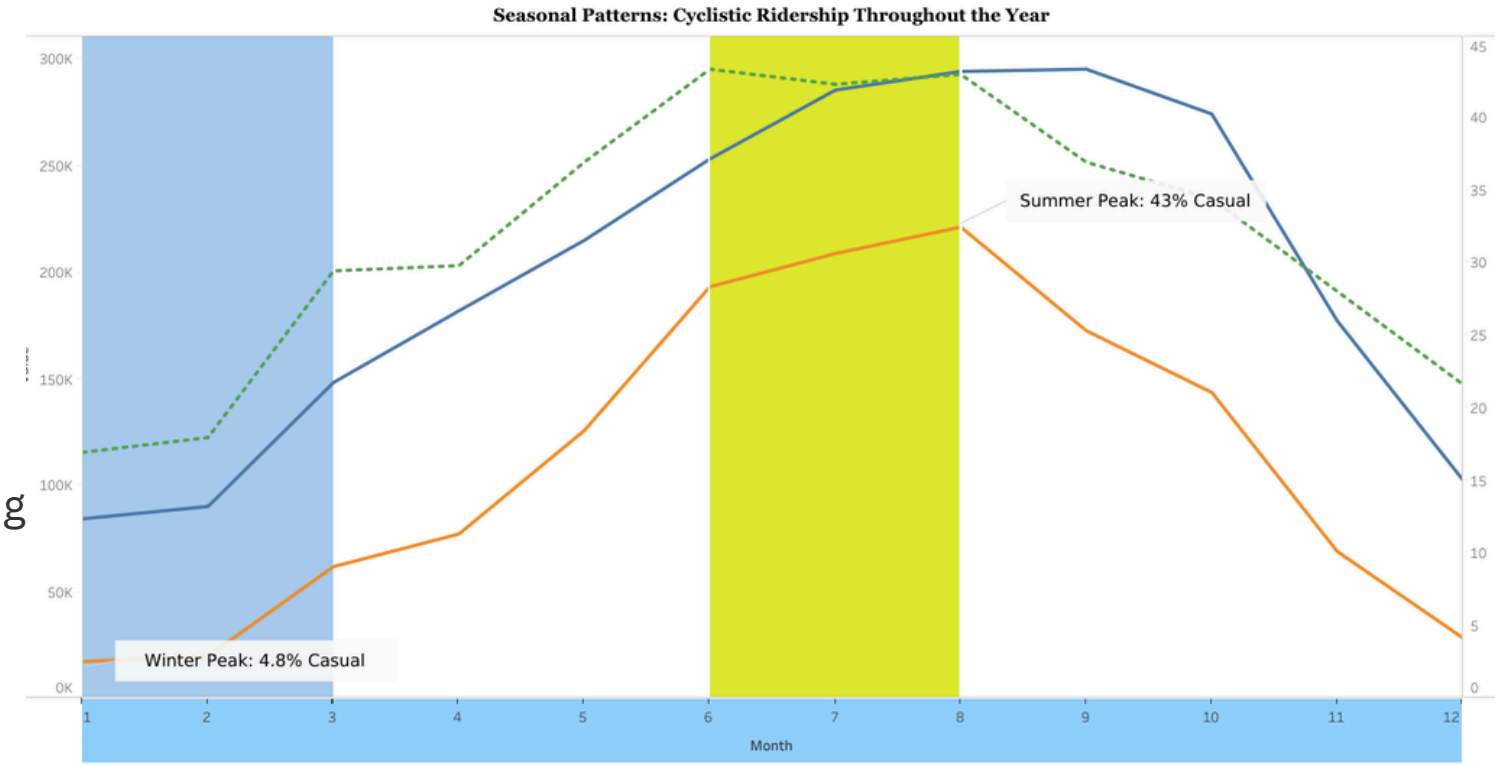


Members peak on weekdays; casual riders peak on weekends

# Seasonal Trends: The Summer Spike

The Winter Baseline: Members maintain steady usage year-round. Casual usage drops to ~17% of total rides.

The Summer Explosion: Casual ridership peaks dramatically in June, July, and August (reaching 43% of total volume).

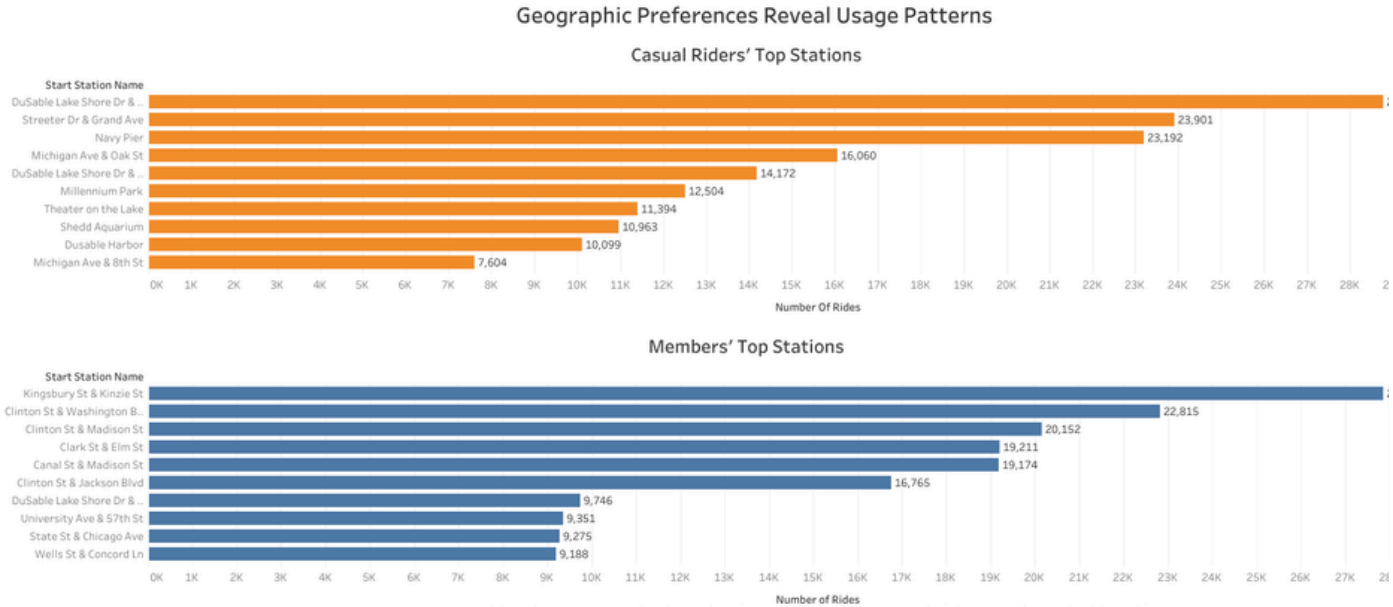


Casual ridership peaks in summer months; members remain consistent

# Geographic Preferences: Business vs. Leisure

Member Hubs: Centered around business districts and transit stations (e.g., Kingsbury St).

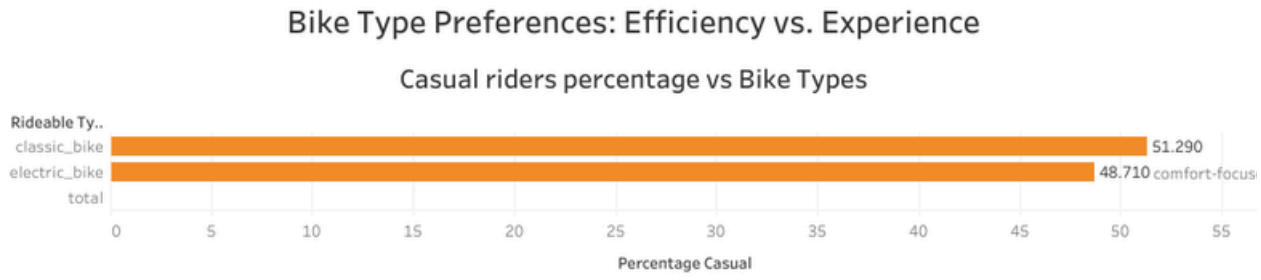
Casual Hotspots: Heavily clustered around tourist attractions and the lakefront (e.g., DuSable Lake Shore Dr, Navy Pier).



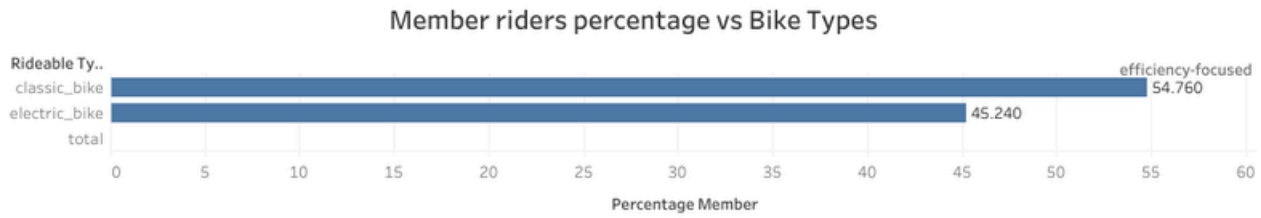
# Bike Type Preferences

Classic Bikes (53.5%): Remain the dominant choice overall, particularly favored by Members for routine commutes.

Electric Bikes (46.5%): Seeing strong adoption from both groups, but Casual riders show a slightly more balanced preference.



Casual riders show higher electric bike adoption, suggesting comfort prioritization



# Strategic Recommendations

## 1. Target the "Weekend Explorer"

Casual usage spikes on Saturdays and Sundays. Introduce a targeted "Weekend-to-Annual" upgrade promotion directly targeting weekend riders.

## 2. Launch a Summer Conversion Campaign

Concentrate the marketing budget on the June-August window. Deploy geo-fenced mobile ads and physical signage at top casual stations like Navy Pier and DuSable Lake Shore Dr.

## 3. Emphasize "Duration Value" in Messaging

Casual trips average 22 minutes (82% longer than members). Marketing should emphasize the cost-savings of an annual membership for long, leisurely rides to overcome price objections.
